Environmental Consultant Firm Triterra Offers Practical Solutions to Environmental Challenges

By Triterra
Dated: Dec 29, 2009

Servicing private and public sector developers, Triterra Possesses and Shares Invaluable Environmental Knowledge.

Environmental Consulting Firm, Triterra, offers professional assistance in identifying and implementing practical solutions to environmental challenges arising during the development and redevelopment of commercial and residential projects.

Triterra is retained to evaluate, quantify, and minimize the potential from existing environmental conditions when their clients are acquiring or financing industrial or commercial real estate. The environmental consultant firm has a well-defined process for identifying potential liabilities and risks starting with a Phase I Environmental Site Assessment (ESA). This level of due diligence determines the level of concern, if any, over the property. Triterra's environmental consulting services are available through http://www.triterra.us/services/environmental_consulting_firm/.

When concerns are identified, a Phase II ESA is conducted, which usually involves intrusive sampling of soil and groundwater to evaluate whether or not risks identified by the initial ESA have resulted in the presence of contamination. If contamination is identified, Triterra communicates a strategy to minimize the potential for risk and liability. Depending on the state and magnitude of the risk, specific remediation or other corrective actions must be taken.

In addition to site remediation, the environmental consultant firm assists clients with other real estate related environmental issues, including wetlands delineation, indoor air quality, asbestos, mold, radon, and lead paint.

###
